                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   뭉
                                                                                                          The invention relates to a novel pharmaceutical composition, which has a CC first active agent comprising an oligonucleotide antisense to the CC initiation codon, coding region, 5' or 3' end genomic flanking regions, CC initiation codon, coding region, 5' or 3' end genomic flanking regions, CC initiation codon, coding a polypeptide associated with lung and/or coding a polypeptide associated with lung and/or coding a polypeptide associated with lung and/or compassion of the invention and a second active agent comprising an cC antiinflammatory servoid and ubiquinone. A composition of the invention has antiinflammatory, antiallergic, antiasthmatic, hypotensive, and cytostatic activity. The composition may have a cuse in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also composition as the prophylactic or therapeutic respiratory effect of an antiinflammatory steroid in a subject, for reducing or depleting levels of antiinflammatory steroid in a subject, for reducing levels of adenosine creceptor, producing bronchodilation, increasing levels of adenosine receptor, producing bronchodilation, increasing levels of biquinone or lung surfactant in a subject's tissue, or treating bronchoconstriction, constriction, lung sinflammation, lung allergies, or a respiratory disease or condition. Specification, but was obtained in electronic format directly from WIPO care from wire or constriction and constrictio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                      The invention relates to a novel pharmaceutical composition, which has a confirmation codon, coding region, 5' or 3' end genomic flanking regions, 5' or 3' end genomic flanking regions, 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of junctions of genes encoding a polypeptide associated with lung and/or masal airway dysfunction and a second active agent comprising an antialflammatory steroid and ubiquinone. A composition of the invention has antiinflammatory, antiallergic, antiasthmatic, hypotensive, and cytostatic activity. The composition may have a use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antiinflammatory steroid in a subject, for reducing or depleting levels of adenosine receptor, producing bronchodilation, increasing levels of indenosine or lung surfactant in a subject stasue, or treating bronchoconstriction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; antisense; lung dysfunction; nasal aliway dysfunction; antiinflammatory steroid; ubiquinone; antiinflammatory; antiallergic; antiasthmatic; hypotensive; immunosuppressive; cytostatic; gene therapy; antisense gene therapy; respiratory; lung; adenosine sensitivity; adenosine receptor; bronchodilation; bronchoconstriction; lung allergy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pharmaceutical composition for treating ailments associated with impaired respiration, has oligo(s) antisense to specific gene(s) or its corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
                                                                                                       lung inflammation, lung allergies, or a respiratory disease or condition. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human oligonucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    17-OCT-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                                                                                       CC first active agent comprising an oligonucleotide antisense to the contribution codon, coding region, 5' or 7' end genomic flanking regions, CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of CC junctions of genes encoding a polypeptide associated with lung and/or CC nasal airway dysfunction and a second active agent comprising an CC antiinflammatory steroid and ubiquinone. A composition of the invention CC antiinflammatory, antiallergic, antiasthmatic, hypotensive, CC immunosuppressive, and cytostatic activity. The composition may have a CC use in antisense gene therapy. The composition is useful for treating or CC preventing a respiratory, lung or malignant disease or condition, also CC for enhancing the prophylactic or therapeutic respiratory effect of an CC interpretating sensitivity to adenosine, reducing or depleting levels of of reducing sensitivity to adenosine, reducing levels of adenosine cof contributions and prophylactic or treating bronchocomstriction, CC lung inflammation, lung allergies, or a respiratory disease or condition, CC Note: The sequence data for this patent is not represented in the printed contribution, but was obtained in electronic format directly from WIPO CR at fer wine intributed accompany.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

                                                                                           junctions of genes encoding a polypeptide associated with lung and/or casal airway dysfunction and a second active agent comprising an ansal airway dysfunction and a second active agent comprising an cantinfilammatory steroid and ubiquinone. A composition of the invention can antiinfilammatory, antiallergic, antiasthmatic, hypotensive, and cytostatic activity. The composition may have a use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antiinfilammatory steroid in a subject, for reducing or depleting levels of adenosine receptor, producing bronchodilation, increasing levels of adenosine receptor, producing bronchodilation, increasing bronchoconstriction, lung surfactant in a subject's tissue, or treating bronchoconstriction, lung surfactant in a subject's tissue, or respiratory disease or condition.

Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; antisense; lung dysfunction; nasal airway dysfunction; antiinflammatory steroid; ubiquinone; antiinflammatory; antiallergic; antiasthmatic; hypotensive; immunosuppressive; cytostatic; gene therapy; antisense gene therapy; respiratory; lung; adenosine sensitivity; adenosine receptor; bronchodilation; bronchoconstriction; lung allergy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        initiation codon, coding region, 5' or 3' end genomic flanking regions, 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel pharmaceutical composition, v first active agent comprising an oligonucleotide antisense to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pharmaceutical composition for treating ailments associated with impaired respiration, has oligo(s) antisense to specific gene(s) or its corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          24-APR-2001; 2001US-0286137P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                          junctions of genes encoding a polypeptide associated with lung and/or nasal airway dysfunction and a second active agent comprising an antiinflammatory steroid and ubiquinone. A composition of the invention has antiinflammatory, antiallergic, antiasthmatic, hypotensive, immunosuppressive, and cytostatic activity. The composition may have a use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antiinflammatory steroid in a subject, for reducing levels of adenosine of receptor, producing bronchodilation, increasing levels of ubiquinone or receptor, producing bronchodilation, increasing levels of ubiquinone or
                                                                                                    lung surfactant in a subject's tissue, or treating bronchoconstriction, lung inflammation, lung allergies, or a respiratory disease or condition. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel pharmaceutical composition, which has first active agent comprising an oligonucleotide antisense to the initiation codon, coding region, 5' or 3' end genomic flanking regions, 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pharmaceutical composition for treating ailments associated with impaired respiration, has oligo(s) antisense to specific gene(s) or its corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure; SEQ ID NO 4258; 872pp; English

     The invention relates to a novel pharmaceutical composition, which has a CC first active agent comprising an oligonucleotide antieense to the CC initiation codon, coding region, 5' or 3' end genomic flanking regions, CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of CC junctions of genes encoding a polypeptide associated with lung and/or CC nasal airway dysfunction and a second active agent comprising an CC antiinflammatory steroid and ubsquinone. A composition of the invention CC immunosuppressive, and cycostatic activity. The composition may have a CC use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also CC for enhancing the prophylactic or therapeutic respiratory effect of an CC antiinflammatory steroid in a subject, for reducing or depleting levels of or reducing sensitivity to adenosine, reducing levels of adenosine creceptor, producing bronchodilation, increasing levels of ubiquinone or CC lung inflammation, lung allergies, or a respiratory disease or condition.

CC Note: The sequence data for this patent is not represented in the printed as pecification, but was obtained in electronic format directly from WIPO as feffication, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
                                              CC The invention relates to a novel pharmaceutical composition, which has a CC first active agent comprising an oligonucleotide antisense to the CC initiation codon, coding region, 5' or 3' end genomic flanking regions, CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of junctions of genes encoding a polypeptide associated with lung and/or CC nasal airway dysfunction and a second active agent comprising an CC antiinflammatory steroid and ubiquinone. A composition of the invention CC immunosuppressive, and cytostatic activity. The composition may have a CC use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also CC preventing a respiratory, lung or malignant disease or condition, also CC for enhancing the prophylactic or therapeutic respiratory effect of an antiinflammatory steroid in a subject, for reducing or depleting levels of or reducing sensitivity to adenosine, reducing levels of adenosine caceptor, producing bronchodilation, increasing levels of ubiquinone or CC lung inflammation, lung allergies, or a respiratory disease or condition. CC Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO or at feature of the printed as patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

This invention relates to a novel method for detecting a nucleic acid having 2 portions. The method comprises providing nanoparticles having 2 coligonucleotides attached, where the oligonucleotide on each nanoparticle has a sequence complementary to a sequence of 2 portions of nucleic acid. The nucleic acid and nanoparticle are contacted to allow hybridisation of the oligonucleotide on the nanoparticle with two or more portions of nucleic acid and observing a detectable change brought about by the nybridisation. The method of the invention is useful for separating a selected nucleic acid having 2 portions. From other nucleic acids, and for detecting nucleic acids having 2 portions. The method of the invention is useful for detecting any type of nucleic acids which may be used for diagnosis of disease and in sequencing of nucleic acids. Preferably, the method is useful for detecting nucleic acids for preferably, the method is useful for detecting incleic acids for preferably, the method is useful for detecting nucleic acids for preferably, the method is useful for detecting nucleic acids for preferably, the method is useful for detecting nucleic acids for preferably, the method is useful for detecting nucleic acids for preferably, the method is useful for detecting nucleic acids for preferably the method is useful for detecting nucleic acids for preferably the method is useful for detecting nucleic acids for preferably the method is useful for detecting nucleic acids for preferably the method is useful for detecting nucleic acids in the nucleic acids for preferably, the method is useful for detecting nucleic acids for preferably the method is useful for detecting nucleic acids for preferably the method is useful for detecting nucleic acids for preferably the method is useful for detecting nucleic acids for preferably the method of the nucleic acids for preferably the method is useful for detecting nucleic acids for preferably the nucleic acids having the nucleic acids having the nucleic acids having the nucleic 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mirkin ...

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                                                                                                         The present sequence is an example of nucleic acid probes of the invention. The probe may be doubly labelled with non-identical covalently attached dyes, e.g. the fluorescent intercalator ethidium, which serves as the detector dye and the fluorescent dye fluorescein, which serves as the donor dye of a fluorescent resonance energy transfer (FRET) system. A bifunctional linker was used to attach the dyes to the oligonucleotide. The probe generates a fluorescent signal upon hybridisation to a complementary nucleic acid based on the interaction of the intercalator with the formed double-stranded DNA. Nucleic acid probes of the invention can be used in homogeneous assays, real-time PCR monitoring, transcription assays, expression analysis on nucleic acid microarrays and other microarray applications such as genotyping
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     disorders, in forensics, in DNA sequencing, for paternity testing, for cell line authentication, for monitoring gene therapy, etc. This method involves detecting nucleic acids based on observing a colour change with the naked eye so is cheap, fast, simple and robust, and does not require specialised expensive equipment. The present sequence represents a thiol modified oligonucleotide sequence used to demonstrate the method of the
                                                                                                              Sequence 20 BP; 0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Detection or quantification of nucleic acid analyte, by hybridizing a nucleic acid probe having non-identical covalently attached dyes, with nucleic acid analyte, and measuring change in fluorescence of the probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Bruce I,

```

밁

δ

Novel antisense oligonucleotide which is targeted to mRNA encoding human raf and which is capable of inhibiting raf expression, useful for treating or preventing hyperproliferative conditions such as cancer.

The invention relates to an oligonucleotide 8-50 nucleotides in length combined in the stargeted to mRNA encoding human c-raf, a-raf or b-raf (raf is a composition kinase playing a regulatory role in signal transduction, comprising the oligonucleotide and a pharmaceutically carcimomal, composition comprising the oligonucleotide and a pharmaceutically composition comprising the oligonucleotide and a pharmaceutically composition the expression of human raf in human cells or tissues, by contacting the human cells or tissues with the oligo. The oligo. is also is useful for treating or preventing a disease or condition associated composition of raf by administering it in combination with a composition of raf is abnormal expression, and the condition is a composition for raf is abnormal expression, and the condition is a composition of raf is abnormal expression, and the condition is a composition of cells. The oligo. Is also useful for inhibiting the role of detecting and determining the role of raf expression in combination with a composition cell functions and physiological processes and conditions and for purposes. The present sequence is an antisense oligonucleotide targeting conditions associated with raf expression and for research purposes. The present sequence is an antisense oligonucleotide targeting continuous cell functions associated with raf expression and for research continuous cell functions associated with raf expression and for research continuous cell functions associated with raf expression and for research continuous cell functions associated with raf expression and for research continuous cell functions associated with raf expression and for research continuous cell functions associated with raf expression and for research continuous cell functions associated with raf expression and for research continuous cell functions and for research continuous cell functions and for research continuous cell functions and fu

                                                                     CThe present invention describes a method (MI) for preparing an CC internucleotide phosphorothioate linkage enriched in the Sp or Rp CC enantiomer between a synthon having a hydroxyl moiety at the 5' position CC and a 2'-substituted nucleoside having an activated phosphate moiety at the 2'-substituted nucleoside having an activated phosphate moiety at CC the 3'-position, comprising coupling a synthon with a 2'-substituted CC nucleoside in the presence of coupling agent that is selected to enhance CC either the Rp or Sp enantiomer according to its pKa. This method is CC useful for preparing an oligonucleotide having at least one region of CC internucleotide linkages that is enhanced in the Sp or Rp enantiomer, CC which involves providing a nucleotide having a hydroxyl moiety at the 5'-position or a growing oligonucleotide having a hydroxyl moiety at CC the 5'-position, coupling the nucleotide or growing oligonucleotide chain to a 2'-substituted nucleoside having an activated phosphate moiety at the 5'-position in the presence of the coupling agent, and repeating the CC coupling step until the desired number of linkages that is coligonucleotide having a region of internucleotide linkages that is coligonucleotide having a region of internucleotide linkages that is coligonucleotide having a region of internucleotide linkages that is coligonucleotide having a region of internucleotide linkages that is coligonucleotide having a region of internucleotide linkages that is coligonucleotide linkages that is enhanced in the Sp and/or Rp CC enantiomer. Oligonucleotide linkages that is enhanced in the Sp and/or Rp CC enantiomer. Oligonucleotide linkages that is enhanced in the Sp and/or Rp CC enantiomer. Oligonucleotide linkages that is enhanced in the Sp and/or Rp CC enantiomer. Oligonucleotide linkages that is enhanced in the Sp and/or Rp CC enantioner. Oligonucleotide linkages that is enhanced in the Sp and/or Rp CC enantioner.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Preparing internucleotide phosphorothioate linkage enhanced in Sp/Rp enantiomer, by coupling a synthon with 2'-substituted nucleoside in presence of coupling agent having a pKa that enhances linkage in Sp/Rp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          08-APR-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ABZ22916;

comprising oligonucleotides, effective for alleviating
CC comprising oligonucleotides, effective for alleviating
CC reducing adenosine sensitivity, levels of adenosine (A) receptors,
CC surfactant depletion or hyposecretion, when administered to a mammal. The
CC oligonucleotides are derived from a gene encoding or regulating
CC expression of a target polypeptide associated with lung airway or lung
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC the invention has odescribes a kit, that comprises: (a) a delivery
CC device, in separate containers, (b) the oligonucleotides, (c)
CC instructions for adding a carrier and for use of the kit. The composition
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC device, in separatory, lung or malignant disease. The administered
CC composition comprises oligo and is administered to reduce the production
CC treating a respiratory, lung or malignant disease. The administered
CC composition comprises oligo and is administered to reduce the production
CC or availability, or to increase the degradation of the target mRNA or to
CC reduce the amount of target polypeptide present in the lungs. The
CC inflammation, allergies and/or bronchoconstriction and/or lung
CC inflammation, allergies and/or surfactant hypoproduction are associated
CC inflammation, allergies, asthma, impeded respiration, respiratory
CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
CC transplantation rejection, pulmonary infections, bronchitis or cancer.
CC transplantation content of the anti-sense oligon corresponding to
CC the oligonal engine into the target RNA serves to prevent the breakdown of
CC the oligonal engine content of the state free adenosine into the swatem
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 1026

                                                                             comprising oligonuclectides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The oligonuclectides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligonuclectides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, is analgesic, hypotensive, immunosuppressive and cytostatic activity, is a partial device.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted nucleic acids associated with lung airway or lung dysfunction, an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; antisense; bronchoconstriction; allergy; hyposecretion; pain; respiratory tract inflammation; adenosine sensitivity; lung; cancer; surfactant depletion; antiallergic; antinflammatory; antiasthmatic; analgesic; hypotensive; immunosuppressive; cytostatic; cystic fibrosis; beta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory disease; pulmonary hyportension; respiratory disease; chronic obstructive pulmonary disease; cancer; bronchitis;
      beta-adrenergic agonist. The composition is useful for preventing o treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the produ
                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention

The pulmonary obstruction, and/or bronchoconstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it
                                                                                                                                                                                                                     Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted nucleic acids associated with lung airway or lung dysfunction, and bronchodilating agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            beta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory distress syndrome; allergic rhinitis; pulmonary hypertension; emphysema; chronic obstructive pulmonary disease; cancer; bronchitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; antisense; bronchoconstriction; allergy; hyposecretion; pain; respiratory tract inflammation; adenosine sensitivity; lung; cancer; surfactant depletion; antiallergic; antiinflammatory; antiasthmatic; analgesic; hypotensive; immunosuppressive; cytostatic; cystic fibrosis; analgesic; hypotensive; immunosuppressive; cytostatic; cystic fibrosis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC surfactant depletion or hyposecretion, when administered to a mammal. The oligonucleotides are derived from a gene encoding or regulating CC expression of a target polypeptide associated with lung airway or lung CX dysfunction or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (a) a delivery CX device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, CX analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered CX composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The CX pulmonary obstruction, and/or burnachoconstriction and/or lung cinflammation, allergies and/or burnachoconstriction and/or lung cinflammation, allergies, asthma, impeded respiration, respiratory CX distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. Cx thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system cy. Jungarted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC comprising oligonucleotides, effective for alleviating composition, respiratory tract inflammation, allergies and CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, CC surfactant depletion or hyposecretion, when administered to a mammal. The CC oligonucleotides are derived from a gene encoding or regulating CC expression of a target polypeptide associated with lung airway or lung CC dysfunction or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (a) a delivery CC instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antisinflammatory, antiasthmatic, antigesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenargic agonist. The composition is useful for preventing or CC canalgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenargic agonist. The composition is useful for preventing or CC creating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The CC ulmonary obstruction, and/or burdactant hypoproduction are associated with a disease or condition such as pulmonary vascoconstriction are associated with a disease or condition such as pulmonary vascoconstriction are associated with a disease or condition such as pulmonary vascoconstriction are pulmonary conditions, bronchities or cancer. The reduced adenosine content of the anti-sense oligos corresponding to the oligonary disease, pulmonary tractions, bronchities or cancer. The reduced adenosine content of the anti-sense oligos corresponding to the oligonary brain, heart, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

The coligonucleotides are derived from a gene encoding or regulating CC expression of a target polypeptide associated with lung airway or lung CC dysfunction or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (a) a delivery CC device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition CC of the invention has antiallergic, antiinflammatory, antiasthmatic, CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered CC composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The CC inflammation, allergies and/or bronchoconstriction and/or lung confilmmation, allergies and/or bronchoconstriction and/or lung confilmmation, allergies, asthma, impeded respiration, respiratory cc inflammation, allergies, asthma, impeded respiration, respiratory cc inflammation rejection, pulmonary infections, bronchitis or cancer. Cc the reduced adenosine content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system cc. I may brain, heart, kidney, etc, tissue environment and thereby, to respect any meanted efforts the attribute of the surface of the system content of the surface of the content of the surface of the content of the system content of the system content of the system the breakdown of the system content and efforts the system content of the sys

CC surfactant depletion or hyposecretion, when administered to a mammal. The expression of a target polypsptide associated with lung airway or lung CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.

CC The invention also describes a kit, that comprises: (a) a delivery CC device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The composition, allergies and/or bronchoconstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vascoconstriction, comprises syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer.

CC the oligonucleotides into products that free adenosine into the system of the oligonary brain, heart, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it
                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    surfactant depletion; antiallergic; antiinflammatory; antiasthmatic; analgesic; hypotensive; immunosuppressive; cytostatic; cystic fibrosis; beta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory distress syndrome; allergic rhinitis; pulmonary hypertension; emphysema; chronic obstructive pulmonary disease; cancer; bronchitis; pulmonary transplantation rejection; ss; primer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          bronchoconstriction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel composition (a) a fir comprising oligonucleotides, effective for alleviating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted nucleic acids associated with lung airway or lung dysfunction, and
                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 15; SEQ ID NO 4258; 763pp; English

XX Computating originated the present inflammation, allergies and contract the contract of adenosine (A) receptors, configuration or hyposecration, when administered to a mammal. The coligonucleotides are derived from a gene encoding or regulating conspired in separate containers, (b) the oligonucleotides are derived from a gene encoding or regulating construction or cancer and can be anti-sense to the corresponding mRNA. Construction also describes a kit, that comprises (a) a delivery construction also describes a kit, that comprises (b) the invention also describes a kit, that comprises (c) constructions for adding a carrier and for use of the kit. The composition confirms for adding a carrier and for use of the kit. The composition confirms for adding a carrier and for use of the kit. The composition comprises oligo and is administered to preventing or composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The composition contracts of the production are associated with a disease or condition such as pulmonary vasoconstriction.

Considering the production and/or bronchoconstriction and/or lung confidence or condition such as pulmonary vasoconstriction.

Considering the production of the confidence of the conf This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating comprising oligonucleotides, kidney, e etc, ដ

CC This invention describes a novel composition (a) a first active agent, CC comprising oligonucleotides, effective for alleviating CC pronchoconstriction, respiratory tract inflammation, allergies and CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, CC surfactant depletion or hyposecretion, when administered to a mammal. The CC oligonucleotides are derived from a gene encoding or regulating CC expression of a target polypeptide associated with lung airway or lung CC dysfunction or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (a) a delivery CC instructions for adding a carrier and for use of the kit. The composition of the invention has antiallargic, antiinflammatory, antiasthmatic, CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a CC composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁

This invention describes a novel composition (a) a first active comprising oligonucleotides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies reducing adenosine sensitivity, levels of adenosine (A) or (A) surfactant depletion or hyposecretion, when administered to a n

denosine (A) or (A) receptors, administered to a mammal. The

and

(a) a first active

Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targ nucleic acids associated with lung airway or lung dysfunction

dysfunction,

targeted

ö

WPI; 2003-093058/08.

Claim 15;

SEQ ID NO 3861; 763pp; English.

bronchodilating agent.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 1035
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cc oligonucleotides are derived from a gene encoding or regulating cc expression of a target polypeptide associated with lung airway or lung cysfunction or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (a) a delivery construction or cancer and can be anti-sense to the corresponding mRNA. CC device, in separate containers, (b) the oligonucleotides, (c) of the invention has antiallergic, antiinflammatory, antiasthmatic, analysesic, hypotensive, immunosuppressive and cytostatic activity, is a ccraim at the composition is useful for preventing or cureating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The composition, allergies and/or bronchoconstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasconstriction are associated conflammation, allergies, asthma, impeded respiration, respiratory conflammation, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to the oligonacleotides into products that free adenosine into the system content of the anti-sense oligos corresponding to the oligonacleotides into products that free adenosine into the system content of the anti-sense oligos corresponding to the oligonacleotides into products that free adenosine into the system content of the anti-sense oligos corresponding to the oligonacleotides into products that free adenosine into the system content of the content of the system content of the content of the system content of the content of the content

밁 S

Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targe nucleic acids associated with lung airway or lung dysfunction, bronchodilating agent. targeted to

Claim 15; SEQ ID NO 677; 763pp; English.

Computating originic represent the processor of adenosine, allergies and construction, respiratory tract inflammation, allergies and construction or hyposecretion, when administered to a mammal. The coligonucleotides are derived from a gene encoding or regulating construction or cancer and can be anti-sense to the corresponding mRNA. Construction also describes a kit, that comprises: (a) a delivery construction also describes a kit, that comprises: (a) a delivery construction also describes a kit, that comprises: (a) a delivery construction also describes a kit, that comprises: (a) a delivery construction also describes a kit, that comprises: (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antistiflammatory, antiasthmatic, and treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to readuce the amount of target polypeptide present in the lungs. The conflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vascoonstriction are associated with a disease or condition such as pulmonary vascoonstriction are associated conflammation, allergies, asthma, impeded respiration, respiratory thypertension, emphysema, chronic obstructive pulmonary disease, pulmonary conflammation, respiratory conflammation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the conflammation rejection, products that free adenosine into the system conflammation, heart, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it comprising oligonucleotides, effective describes a novel composition for alleviating (a) first active agent,

The coligonucleotides are derived from a gene encoding or regulating control of a target polyposecretion, when administered to a mammal. The coligonucleotides are derived from a gene encoding or regulating cyposecretion of a target polyposecretion, when administered to a mammal. The coligonucleotides are derived from a gene encoding or regulating cyposecretion of a target polypostide associated with lung airway or lung cypostic dysfunction or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (a) a delivery constitution of the invention has antiallergic, antiinflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypoptide present in the lungs. The condition allergies and/or bronchoconstriction and/or lung inflammation, allergies and/or bronchoconstriction and/or lung conflammation, allergies, asthma, impeded respiration, respiratory conflammation, allergies, asthma, impeded respiration, respiratory conflammation, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation pulmonary content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system content of the arty endinged to the system of the carget that free adenosine into the system content of the sy

Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted to nucleic acids associated with lung airway or lung dysfunction, and bronchodilating agent.

Claim 15; SEQ ID NO 4055; 763pp; English.

This invention describes a novel composition (a) a first active agent, comprising oligonuclectides, effective for alleviating composition of property and composition allergies and creducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, compression of a target polypeptide associated with lung airway or lung compression of a target polypeptide associated with lung airway or lung compression of a target polypeptide associated with lung airway or lung compression of a target polypeptide associated with lung airway or lung compression of a target polypeptide associated with lung airway or lung compression of a target polypeptide associated with lung airway or lung compression of a target polypeptide associated with lung airway or lung compression of the invention also describes a kit, that comprises (a) a delivery compression of the invention has antiallergic, antiantial antial contivity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to remain any obstruction, and/or bronchoconstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, pulmonary vasoconstriction, pulmonary vasoconstriction, pulmonary vasoconstriction, pulmonary vasoconstriction, pulmonary vasoconstriction, composition complises, asthma, impeded respiration, respiratory composition rejection, pulmonary infections, bronchitis or cancer. CC the oligonucleotides into products that free adenosine into the system composition content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system composition content and thereby, to prevent any unwanted effects due to it

CC comprising oligonucleotides, effective for alleviating
CC treducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC surfactant depletion or hyposecretion, when administered to a mammal. The
CC surfactant depletion or hyposecretion, when administered to a mammal. The
CC oligonucleotides are derived from a gene encoding or regulating
CC expression of a target polypeptide associated with lung airway or lung
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC The invention also describes a kit, that comprises: (a) a delivery
CC device, in separate containers, (b) the oligonucleotides, (c)
CC instructions for adding a carrier and for use of the kit. The composition
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC treating a respiratory, lung or malignant disease. The administered
CC composition comprises oligo and is administered to reduce the production
CC or availability, or to increase the degradation of the target mRNA or to
CC reduce the amount of target polypeptide present in the lungs. The
CC inflammation, allergies and/or bronchoconstriction and/or lung
CC inflammation, allergies and/or surfactant hypoproduction are associated
CC inflammation, allergies, asthma, impeded respiration, respiratory
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC transplantation rejection, pulmonary infections, bronchitis or cancer.
CC transplantation rejection, pulmonary infections, bronchitis or cancer.
CC thyolidos present in the target RNA serves to prevent the breakdown of
CC the olidonucleotides into products that free adenosine into the system
CC the olidonucleotides into products that free adenosine into the system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RESULT 1038
ABD25045
the oligonucleotides into products that free adenosine into e.g., lung, brain, heart, kidney, etc, tissue environment ar prevent any unwanted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 15;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 bronchodilating agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted to nucleic acids associated with lung airway or lung dysfunction, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         respiratory tract inflammation; adenosine sensitivity; lung; cancer; surfactant depletion; antiallergic; antiinflammatory; antiasthmatic; antiagesic, hypotensive; immunosuppressive; cytostatic; cystic fibrosis; beta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          respiratory tract inflammation; adenosine sensitivity; lung; cancer; surfactant depletion; antiallergic; antiinflammatory; antiasthmatic; analgesic; hypotensive; immunosuppressive; cytostatic; cystic fibrosis; beta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory distress syndrome; allergic rhinitis; pulmonary hypertension; emphysema; chronic obstructive pulmonary disease; cancer; bronchitis; pulmonary transplantation rejection; ss; primer.
                                                                                          comprising oligonucleotides, effective for alleviating comprising oligonucleotides, effective for alleviating pronchoconstriction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The oligonucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The
                                                                                                                                                                                                                                                                                                                                             Pharmaceutical composition for treating asthma, has antisense oligonuclectide containing less percentage of adenosine, target nucleic acids associated with lung airway or lung dysfunction, bronchodilating agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ABD25350 standard;

The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptor surfactant depletion or hyposecretion, when administered to a mammal oligonucleotides are derived from a gene encoding or regulating Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted to nucleic acids associated with lung airway or lung dysfunction, and Claim 15; WPI; 2003-093058/08. 24-APR-2001; 2001US-0286036P 23-APR-2002; 2002WO-US013143 WO200285309-A2 ABD29510 standard; DNA; 20 bronchodilating agent. CC The invention also describes a kit, that comprises: (a) a delivery

CC device, in separate containers, (b) the oligonucleotides, (c)

instructions for adding a carrier and for use of the kit. The composition

CC instructions for adding a carrier and for use of the kit. The composition

CC of the invention has antiallergic, antiinflammatory, antiasthmatic,

CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a

CC treating a respiratory, lung or malignant disease. The administered

CC composition comprises oligo and is administered to reduce the production

CC or availability, or to increase the degradation of the target mRNA or to

CC reduce the amount of target polypeptide present in the lungs. The

CC pulmonary obstruction, and/or bronchoconstriction and/or lung

CC inflammation, allergies and/or surfactant hypoproduction are associated

CC with a disease or condition such as pulmonary vasoconstriction,

CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary

CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary

CC transplantation rejection, pulmonary infections, bronchitis or cancer.

CC thymidines present in the target RNA serves to prevent the breakdown of

CC thymidines present in the target RNA serves to prevent the breakdown of

CC thymidines present in the target that free adenosine into the system

CC construction and thereby, etc, tissue environment and thereby, to

CC prevent any unwanted effects due to it

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating componentriction, respiratory tract inflammation, allergies and creducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, continuing adenosine (B) or hyposecretion, when administered to a mammal. The coligonucleotides are derived from a gene encoding or regulating continuing of a target polypeptide associated with lung airway or lung composition or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition confite invention has antiallergic, antiinflammatory, antiasthmatic, analysesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The composition comprises oligo and is administered to reduce the production such as pulmonary vasoconstriction, and/or bronchoconstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, condition rejection, pulmonary infections, bronchitis or cancer. CC the oligonucleotides into products that free adenosine into the system composition content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the breakdown of the oligonucleotides into products that free adenosine into the breakdown of the oligonucleotides into products that free adenosine into the breakdown of the oligonucleotides into products that free adenosine into the breakdown of the oligonucleotides into pro

                                                                                                                                                                 Comprising oligonuclectures, effective to rathevacting adenosine sensitivity, levels of adenosine (A) receptors, allergies and contractant depletion or hyposecretion, when administered to a mammal. The coligonucleotides are derived from a gene encoding or regulating conjunctation or cancer and can be anti-sense to the corresponding mRNA. Construction or cancer and can be anti-sense to the corresponding mRNA. Construction also describes a kit, that comprises: (a) a delivery constructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, and the analysisic, hypotensive, immunosuppressive and cytostatic activity, is a composition comprises oligo and is administered to reduce the production composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The conformation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction are associated conflammation, allergies, asthma, impeded respiration, respiratory conflammation, allergies, asthma, impeded respiration, respiratory conflammation, allergies, asthma, impeded respiration, respiratory conflammation, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system of the oligonucleotides into products that free adenosine into the system conflammatory the system of the system of the system of the conflammatory and thereby, to prevent any unwanted effects due to it

CC comprising oligonucleotides, effective for alleviating composition of igonucleotides, effective for alleviating composition or hyposecretion, when administered to a mammal. The coligonucleotides are derived from a gene encoding or regulating conjugation or hyposecretion, when administered to a mammal. The coligonucleotides are derived from a gene encoding or regulating conjugation of a target polypoptide associated with lung airway or lung conjugation of a target polypoptide associated with lung airway or lung conjugation of the invention also describes a kit, that comprises: (a) a delivery conjugation of the invention has antiallergic, antiinflammatory, antiasthmatic, analysesic, hypotensive, immunosuppressive and cytostatic activity, is a composition comprises oligo and is administered to reduce the production of the invention comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target manna or availability, or to increase the degradation of the target manna or availability, or to increase the degradation of the target manna or availability, or to increase the degradation of the target manna or availability, or to increase the degradation of the target manna or availability, or to increase the degradation of the target manna or availability, or to increase the degradation of the target manna or availability, or to increase the degradation of the target manna or availability or to increase the degradation of the target manna or availability or to increase the degradation of the target manna or availability or to increase the degradation of the target manna or availability or to increase the degradation and/or lung or availability, or to increase the degradation and/or lung or availability or to increase the degradation of the target polypoproduction are associated or and administered to a manna or availability or to increase the polypoproduction are associated or and or availability or to increase the polypoproduction or availability or and or a

                       CC compesising oligonucleotides, effective for alleviating composition, respiratory tract inflammation, allergies and creducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The coligonucleotides are derived from a gene encoding or regulating cysfunction or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (a) a delivery che invention also describes a kit, that comprises: (a) a delivery consist in separate containers, (b) the oligonucleotides, (c) of the invention has antiallergic, antiinflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytostatic activity, is a creating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The composition surfactant hypoproduction are associated with a disease or condition such as plimonary vasoconstriction are associated with a disease or condition such as plimonary vasoconstriction are associated with a disease or condition such as plimonary vasoconstriction are associated with a disease or condition such as plimonary vasoconstriction are associated with a disease or condition such as plimonary vasoconstriction are associated composition, allergies, asthma, impeded respiration, respiratory composition pulmonary disease, pulmonary disease, pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the content of the serves to prevent the breakdown of the content of the content of the serves to the system of the content of the system of the content of the content of the system of the content of the content of the sys
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; antisense; bronchoconstriction; allergy; hyposecretion; pain; respiratory tract inflammation; adenosine sensitivity; lung; cancer; surfactant depletion; antiallergic; antiinflammatory; antisathmatic; analgesic; hypotensive; immunosuppressive; cytostatic; cystic fibrosis; beta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory distress syndroma; allergic rhinitis; pulmonary hyportension; emphysema; chronic obstructive pulmonary disease; cancer; bronchitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted to nucleic acids associated with lung airway or lung dysfunction, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        g
                      bronchoconstriction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The oligonucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cycostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC The invention also describes a kit, that comprises: (a) a delivery
CC device, in separate containers, (b) the oligonuclectides, (c)
CC instructions for adding a carrier and for use of the kit. The composition
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC beta-adrenergic agonist. The composition is useful for preventing or
CC treating a respiratory, lung or malignant disease. The administered
CC composition comprises oligo and is administered to reduce the production
CC or availability, or to increase the degradation of the target mRNA or to
CC reduce the amount of target polypeptide present in the lungs. The
CC inflammation, allergies and/or bronchoconstriction and/or lung
CC inflammation, allergies and/or bronchoconstriction are associated
CC with a disease or condition such as pulmonary vasconstriction,
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC thymidines present in the target RNA serves to prevent the breakdown of
CC thymidines present in the target RNA serves to prevent the breakdown of
CC thymidines present in the target RNA serves to prevent the breakdown of
CC prevent any unparted affect dime to the
CC prevent and thereby, to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

CC surfactant depletion or hyposecretion, when administered to a mammal. The coligonucleotides are derived from a gene encoding or regulating CC expression of a target polypeptide associated with lung airway or lung CC dysfunction or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (a) a delivery CC device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition containers, the composition is a delivery containers, antiallergic, antiinflammatory, antiasthmatic, cc analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered CC composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The CC inflammation, allergies and/or bronchoconstriction and/or lung CC inflammation, allergies, asthma, impeded respiration, respiratory CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary the reduced adenosine content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system cc the oligonucleotides into products that free adenosine into the system ce g., lung, brain, heart, kidney, etc, tissue environment and thereby, to correspond any unwanted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        bronchoconstriction, respiratory tract inflammation, all reducing adenosine sensitivity, levels of adenosine (A)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 15;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC oligonuclectides are derived from a gene encoding or regulating mRNA.

CC expression of a target polypeptide associated with lung airway or lung CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.

CC The invention also describes a kit, that comprises: (a) a delivery CC instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or CC treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to CC reduce the amount of target polypeptide present in the lungs. The CC pulmonary obstruction, and/or bronchoconstriction and/or lung confilammation, allergies and/or bronchoconstriction are associated CC with a disease or condition such as pulmonary vascomstriction.

CC inflammation, allergies, asthma, impeded respiration, respiratory CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary CC transplantation rejection, pulmonary infections, bronchitis or cancer. CC The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system cc. I numanted effect, due to it.
                                                                                                                                                                                                                                                                                                                                                                          Query Match

Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, target nucleic acids associated with lung airway or lung dysfunction, bronchodilating agent. targeted ç

Claim 15; SEQ ID NO 3807; 763pp; English

ccomprising oligonucleotides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies and creducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The cligonucleotides are derived from a gene encoding or regulating cyspiratory tract inflammatory, and instead of the pletion or cancer and can be anti-sense to the corresponding mRNA. CC instruction or cancer and can be anti-sense to the corresponding mRNA. CC instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, composition comprises oligo and is administered to reverting or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The composition, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vascoonstriction, respiratory transplantation, allergies, asthma, impeded respiration, respiratory transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to the oligonacleotides into products that free adenosine into the system of the oligonacleotides into products that free adenosine into the system of the oligonacleotides into products that free adenosine into the system of the content of the anti-sense oligonacleotides into products that free adenosine into the system of the oligonacleotides into products that free adenosine into the system of the oligonacleotides into products that free adenosine into the system to prevent any unwanted effects due to it This invention describes Ø novel composition (a) a first active

CC surfactant depletion or hyposecretion, when administered to a mammal. The CC oligonucleotides are derived from a gene encoding or regulating CC expression of a target polypeptide associated with lung airway or lung CC dysfunction or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (a) a delivery CC device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered CC composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The CC reduce the amount of target polypeptide present in the lungs. The CC inflammation, allergies and/or bronchoconstriction and/or lung conflammation, allergies, asthma, impeded respiration, respiratory CC inflammation, allergies, asthma, impeded respiration, respiratory CC threatension, emphysema, chronic obstructive pulmonary disease, pulmonary CC threatension, respection, pulmonary infections, bronchitis or cancer. C The reduced adenosine content of the anti-sense oligos corresponding to the middless present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system creamit any unwanted effects due to it.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted to nucleic acids associated with lung airway or lung dysfunction, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    respiratory tract inflammation; adenosine sensitivity; lung; cancer; surfactant depletion; antiallergic; antiinflammatory; antiasthmatic; analgesic; hypotensive; dimmunosuppressive; cytostatic; cystic fibrosis; beta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory distress syndrome; allergic rhinitis; pulmonary hypertension;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               bronchoconstriction, respiratory tract inflammation, allerg reducing adenosine sensitivity, levels of adenosine (A) or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 comprising oligonucleotides, effective for alleviating

                        Computating originate replicatory tract inflammation, allergies and creducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, continuous adenosine sensitivity, levels of adenosine (A) or (A) receptors, continuous are derived from a gene encoding or regulating conjuncted to a mammal. The conjunction of a target polypeptide associated with lung airway or lung conference invention or cancer and can be anti-sense to the corresponding mRNA. Construction or cancer and can be anti-sense to the corresponding mRNA. Constructions for adding a carrier and for use of the kit. The composition conference, in separate containers, (b) the oligonucleotides, (c) constructions for adding a carrier and for use of the kit. The composition conference in the invention has antiallatery, antiinflammatory, antiasthmatic, canalgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenargic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The compliance in the lungs of the information and or bornchoconstriction and/or lung and information and or lung and information an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          문

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it
comprising oligonucleotides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The oligonucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA.
                                                                                                                                                                                                                        Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted to nucleic acids associated with lung airway or lung dysfunction, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; antisense; bronchoconstriction; allergy; hyposecretion; pain; respiratory tract inflammation; adenosine sensitivity; lung; cancer; surfactant depletion; antiallergic; antiinflammatory; antiasthmatic; analgesic; hypotensive; immunosuppressive; cytostatic; cystic fibrosis; beta adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory disease; partialitis; pulmonary hyportension; emphysema; chronic obstructive pulmonary disease; cancer; bronchitis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC device, in separate containers, (b) the oligonucleotides, (c) device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallegic, antiinflammatory, antiasthmatic, cof the invention has antiallegic, antiinflammatory, antiasthmatic, composition compressive, immunosuppressive and cytostatic activity, is a composition comprises oligo and is administered to preventing or creating a respiratory, lung or mallsymant disease. The administered composition comprises oligo and is administered to reduce the production cor availability, or to increase the degradation of the target mank or to reduce the amount of target polypeptide present in the lungs. The composition, and/or bronchoconstriction and/or lung luminary obstruction, and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, compliated compliates and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, compliated compliates and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, compliated compliates and/or surfactant hypoproduction are associated conflammation, allergies and/or surfactant hypoproduction are pulmonary transplantation, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation respection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system c.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
